

FREMEDICA PARTNERS WITH UBC MEN'S HOCKEY TEAM TO LAUNCH AN INNOVATIVE SPORTS PERFORMANCE ENHANCEMENT & RECOVERY PROGRAM

For Immediate Release

VANCOUVER, BRITISH COLUMBIA – February 29, 2024 – Frequency Exchange Corp. (“Frequency Exchange” or the “Company”) (TSXV: FREQ) is thrilled to announce that its wholly-owned subsidiary, **FREmedica Technologies Inc.** (“FREmedica”), has engaged a collaborative partnership with the **UBC Men’s Hockey Team**. The team will serve as beta testers for our **Sports Performance Enhancement & Recovery Program**, which incorporates a program around Focus to support the academic aspect of their University experience.

The **UBC Men’s Hockey Team** will be the first to test our comprehensive **Sports Performance Enhancement & Recovery Program** aimed at enhancing athletic performance and expediting recovery. **FREmedica** is collecting real time data and building out the foundation of our premiere frequency packages based on these results. We anticipate this trial will result in significant overall improvements in sports performance. The **Sports Performance Enhancement & Recovery Program** will enable student-athletes to better balance their demanding schedules, providing stress relief while ensuring academic focus. Designed to meet the needs of athletes across all levels, our sports enhancement program will fulfill the needs of athletes at every level, harnessing optimal performance for professional and elite athletes of all ages and types. We are excited to launch this cutting-edge program to the public in the coming months.

“We had a couple of players using the NIKKI prior to this. Their improvements in sleep quality and recovery were pretty dramatic so I’m excited to see what happens with the launch of the sports specific programs which go beyond the programs NIKKI already has.” **Says Sven Butenschon, Head Coach of UBC Men’s Hockey Team.**

“My personal experience using the NIKKI has been life changing. I wish I had this device while I was still playing professional hockey. I’ve seen major improvements with neurological issues I’ve had over the years including vertigo, nausea, motion sickness and headaches that would affect my vision. I no longer have aches and pains from lingering hockey injuries. I feel lighter and more focused. Energy mode gives me a good boost of energy and passion during my coaching sessions.” **Says Sven.**

Sven states: *“The goal with the team is boosting overall performance on and off the ice. This will help with bounce-back and recovery from stressful playoff games and the stress and anxiety of a rigorous school and sports schedule all while being able to improve focus at a higher academic level.”*

Quote from Stephen Davis, CEO of Frequency Exchange:

*“We want to thank UBC, Sven Butenschon (Head Coach), and his team for participating in our **Sports Performance Enhancement & Recovery Program**”* says Stephen Davis, CEO of Frequency Exchange Corp. *“If we can help the athletes and the student body, remain healthy, well rested and increase their focus, then we have accomplished our goal for the young men and women at UBC.”* Says Davis.

About the Company

Based in British Columbia, Canada, Frequency Exchange is focused on the development and global commercialization of a wearable Frequency Delivery System. Our specialized frequency sets are designed to enhance wellness and improve performance. The brand **“NIKKI”** is the third generation of wearable technology created by the Company. Now we have one frequency delivery system we call **“NIKKI”**, which means **“The Victor of the People”** that can be used in multiple ways including Lyme disease. This wearable technology combined with the frequency sets is the result of years of development and experimentation with advanced bioenergetic technology.
